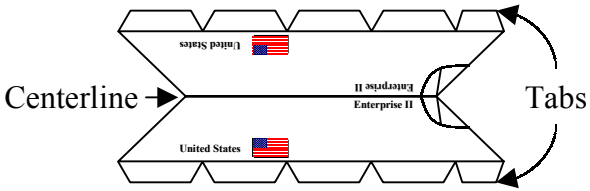
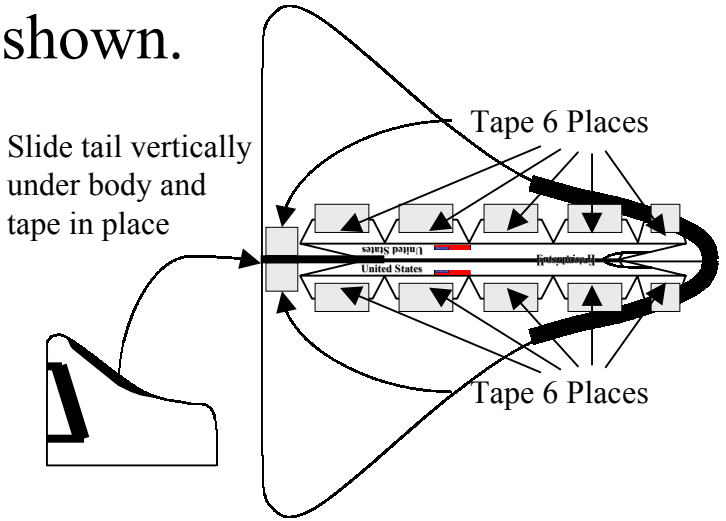
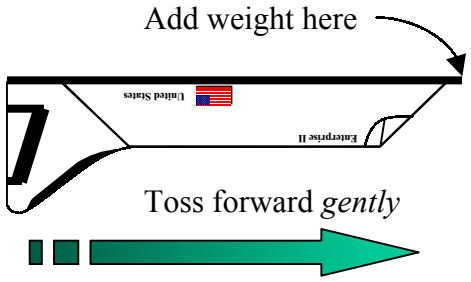
To build your Enterprise II Model Space Shuttle:

- Print the 3 pieces on heavy stock paper, or paste onto poster board.
- Cut out each piece.
- Fold body inward along centerline.
- Fold 10 tabs on body outward.
- Tape body onto wings as shown.
- Slip tail under body and tape in place as shown.





To fly your shuttle:


- Add small weight (such as a paper clip) to the front of the shuttle.
- Holding shuttle upside down by body, *gently* toss forward.
- If nose rises too much, either add weight in front or *gently* bend back of wings downward.
- If nose falls and shuttle crashes, either remove weight from front or *gently* bend back of wings upward.
